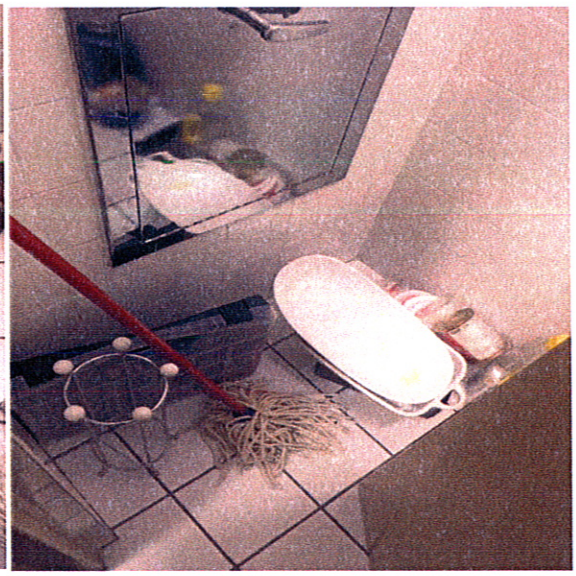
CONDITIONS OF REFUSE ROOMS

Residents continue to leave the refuse/garbage chute rooms on each floor in unacceptable conditions. Items are continuously being left in the refuse/garbage chute rooms daily.

Items such as (loose garbage, recycling, furniture, food etc.) are never to be left on the floor of the refuse/garbage chute room: this causes many problems for residents and staff to deal with.

By doing such activities, the garbage chute access is being blocked and causes odors throughout the floors going into resident units. This is a health and safety hazard for he building.



Only bagged garbage may be placed down the garbage chute. Recycling or compost is to be brought down to the Recycling room located on the ground floor. Furniture or any bulk items are to be placed in the assigned loading bay area.

If the conditions of the refuse/garbage chute rooms do not improve, further action will need to be taken.

Thank you.
